**Please complete a POND HABITAT SURVEY sheet for each pond surveyed in your 1 km grid square.**

The aim is to collect environmental data from each survey pond between June and September. You can learn all the skills needed from our pond habitat survey guide and online video. Before you begin, it's also worth checking to see if environmental data has previously been collected from the pond. This can save you time, since some factors rarely change, and you can download (and later upload) a sheet with these factors auto-filled.

Go to: [www.freshwaterhabitats.org.uk/projects/pondnet/survey-options/habitats](http://www.freshwaterhabitats.org.uk/projects/pondnet/survey-options/habitats) for survey guides and more information.

**Once completed, please don't forget to enter the results online:** [www.freshwaterhabitats.org.uk/projects/waternet/](http://www.freshwaterhabitats.org.uk/projects/waternet/)

Note that you can also **upload photos** or a **sketch map** of the pond, to provide a useful visual record of the site.

- Shaded boxes indicate essential factors to complete for a PSYM assessment (see website for more information).
- Hatched boxes indicate factors used to calculate an HSI score for Great Crested Newts (see website for more info).

<input style="width: 90%;" type="checkbox"/> <b>Is this a new pond?</b> i.e. is pond less than 10 yrs old (choose one option - <i>yes, no, unknown</i> )	<input style="width: 90%;" type="checkbox"/>	<b>What year was the pond created?</b> ( <i>unknown, exact date or nearest decade</i> )
--	--	--

**Pond area**  **Note:** This is the *surface area of the pond when the water is at its highest level (usually in early spring)*. It will probably *not* be the current water level of the pond. The high water level line should be evident from wetland vegetation like rushes at the pond's outer edge. Measure by pacing (single pace = 0.8-1m) or use online maps.

m<sup>2</sup>

**Pond dries?:** choose one option **1 = never dries, 2 = rarely dries, 3 = sometimes dries, 4 = dries annually**

**Never; Rarely:** no more than 2 years in 10, or only in drought; **Sometimes:** dries between 3 years in 10 to most years; **Annually:** deduce pond permanence from local knowledge (e.g. landowner) and personal judgement e.g. water level at the time of the survey. Ponds that dry out annually usually have a hard base.

**Overhanging trees & shrubs:** This is an estimate of how much of the pond is *directly* overhung by trees and shrubs, i.e. that would be shaded if the sun was overhead (use the diagram (right) as a guide).

% of pond overhung by trees and shrubs

% pond margin overhung to at least 1m out from the pond margin

**Fish presence:** choose one option **1 = major, 2 = minor, 3 = possible, 4 = absent**

**Major:** dense populations; **Minor:** small numbers of e.g. goldfish, stickleback; **Possible:** no fish seen, but local evidence suggests present; **Absent:** no records of fish stocking, no fish found during survey.

**Waterfowl impact:** choose one option: **1 = major, 2 = minor, 3 = none**

**Major** = severe impact e.g. few or no submerged plants, water turbid, pond banks have bare patches, feed put down; **Minor** = waterfowl present, but little impact on vegetation, pond still supports submerged plants and banks are not denuded of vegetation; **None** = no evidence of waterfowl impact (moorhens may be present).

**Aquatic vegetation:**

% of the whole pond (wet and dry) occupied by emergent vegetation – incl. plants like grasses, water mint and rushes, but not floating (e.g. duckweeds) or submerged (e.g. water-crowfoot) species - to see a list of emergent species look at the survey guide [www.freshwaterhabitats.org.uk/projects/pondnet/survey-options/habitats](http://www.freshwaterhabitats.org.uk/projects/pondnet/survey-options/habitats).

% of pond water surface area covered by all vegetation (emergent, floating (excl. duckweed) and submerged).

**Water left in the pond:**

% of water area in pond relative to area at maximum water level

cm Drawdown (see diagram) height drop from maximum water level

**Grazing:**

Tick if there is evidence the pond is grazed by livestock. If **yes** complete the following boxes:

% % of whole pond grazed (note that stock can wade into shallow ponds to graze)

% % of pond perimeter grazed (note: stock can wade into shallow ponds to graze otherwise inaccessible edges)

Grazing intensity: rank 1-5 (1=infrequent or low intensity to 5 = margins heavily poached and almost bare)

**Pond management (tick):** use tick boxes to list management within the last 12 months. Use 'other' box for any extra info.

<input type="checkbox"/> Fully dredged	<input type="checkbox"/> Partly dredged	<input type="checkbox"/> >5% vegetation removed	<input type="checkbox"/> <5% vegetation removed
<input type="checkbox"/> Trees planted	<input type="checkbox"/> Trees clear-felled	<input type="checkbox"/> Trees cut back / coppiced	<input type="checkbox"/> Pond changed shape / size
<input type="checkbox"/> Plants introduced	<input type="checkbox"/> Bank plants mown	<input type="checkbox"/> Structural work e.g. to dam	<input type="checkbox"/> Straw added

Add other or more detail

**Turbidity / water clarity:** Estimate turbidity looking down into c.20cm depth of water in the pond.

1 = clear; 2 = moderately clear; 3 = moderately turbid; 4 = turbid

**Inflows and outflows:** (tick if inflow or outflow present or leave blank)

Inflow present  Outflow present

**Water chemistry:** If suitable kits and meters are available (or leave blank)

pH  Conductivity ( $\mu\text{S cm}^{-1}$ )

**Nitrate ( $\text{NO}_3\text{-N ppm}$ ):** PPW kits provided by FHT  
(tick one from the following range categories)

<0.2  0.2-0.5  0.5-1  1-2  2-5  5-10  10+

Nitrate (other kit - give kit name and unit of measurement)

**Phosphate ( $\text{PO}_4\text{-P ppm}$ ):** PPW kits provided by FHT  
(tick one from the following range categories)

<0.02  0.02-0.05  0.05-0.1  0.1-0.2  0.2-0.5  0.5-1  1+

Phosphate (other kit - give kit name and unit of measurement)

**Pond base:**

This refers to the *geology* (i.e. rock-type) that immediately underlies the pond. You may know, or be able to see the underlying geology in the base or banks of the pond, especially in new ponds. If not, check a geology map or leave this section blank.

Choose one of the following to categorise the % composition of **each** of pond base: 1= 0-32%, 2= 33-66%, 3= 67-100%

Silt/ clay  Sand, gravel, cobbles  Hard rock  Peat  Other (please specify)

**Surrounding land use:**

Estimate the *percentage* of surrounding land-use in distance zones from the pond perimeter (i.e. the maximum winter water level) used to assess pond area. In many ponds the 0-5m zone will include surrounding trees/scrub.

Habitat	0-5m	0-100m	Examples
Trees, woodland & scrub	%	%	Deciduous and coniferous woodland, individual trees, scrub and hedgerows.
Heath & moorland			Lowland and upland heathland, moorland and mountain; includes bracken.
Rank vegetation			Unmanaged grass, neglected and abandoned land, set-aside, verges and buffer strips.
Unimproved grassland			Herb-rich, calcareous and acid grassland (good quality plant indicators usually present). Low percentage of agricultural grasses. Not fertilised, little or no drainage.
Semi-improved grassland			A transition category. Grasslands modified by fertilisers, drainage, herbicides or intensive grazing, but retaining elements of natural grassland types in the area.
Improved grassland			Fertile agricultural grass, often bright green and lush; including parks and golf greens.
Arable			All crops. Includes flower and fruit crops (e.g. strawberries) and ploughed land.
Urban buildings & gardens			Areas in curtilage (associated with buildings); including glass-houses and farm yards.
Roads, tracks & paths			Including car-parks and footpaths.
Rock, stone & gravel			Cliffs, rock-outcrops, gravel-pits, quarries, areas of sand and gravel or stone.
Bog, fen, marsh & flush			Wetland vegetation and blanket bog.
Ponds & lakes			Permanent and seasonal waterbodies; including trackway pools.
Streams & ditches			Rivers, streams, ditches, springs and canals
Other (state)			E.g. maritime vegetation, saltmarsh, sand-dune, orchards and railways.

Is the pond in a protected area? (e.g. nature reserve, SSSI, etc)  
(choose one option - yes, no, unknown)

**Location score for Great Crested Newts** (select pond location based on map to right)

A (optimal), B (marginal) or C (unsuitable)

**Number of ponds:** Note: ponds are <2ha in size - to help you calculate the total use the PondNet map, an OS map, Google maps, or other mapping tool):

Number of *other* ponds (exclude the survey pond) in a 1km radius circle centred on the pond centre. Omit ponds separated by amphibian barriers e.g. large rivers or roads.

If there are more than 12 ponds present in the 1km radius, you can just tick this box.

**Habitat quality for amphibians:** (choose one option - 1 = none, 2 = poor, 3 = moderate, 4 = good)

**None** = clearly no suitable habitat within immediate pond locale; **Poor** = habitat with poor structure that offers limited opportunities for foraging and shelter (e.g. amenity grassland); **Moderate** = offers opportunities for foraging and shelter, but may not be extensive; **Good** = extensive habitat that offers good opportunities for foraging and shelter completely surrounds pond e.g. rough grassland, scrub or woodland.

**Water quality for amphibians:** (choose one option - 1 = bad, 2 = poor, 3 = moderate, 4 = good)

**Bad** = clearly polluted, only pollution-tolerant invertebrates, no submerged plants; **Poor** = low invertebrate diversity, few submerged plants; **Moderate** = moderate invertebrate diversity; **Good** = abundant and diverse invertebrate community, often surrounded by semi-natural land e.g. grassland, heath, woodland.

**How much of pond perimeter could be surveyed?** Note areas of pond not accessible.

**Comments box:** e.g. new ownership, changes since previous visit, any other information.
